- Decrease material handling time
- Increase responsibility
- Increase overall efficiency & productivity
- Reduce order pick times

d.mobile IM
MOBILE INVENTORY MANAGEMENT

d.Mobile Inventory Management (d.Mobile IM) facilitates the control, movement and storage placement of materials within a warehouse; and processes the transactions associated with functions including goods receiving, stock transfers, delivery, put away (binning) and picking; all in real time in your current ERP system.

d.Mobile IM also directs and enhances material binning efforts based on real-time information about the status of bin utilisation and location, allowing for better monitoring of the progress of materials through the warehouse.

More precisely, d.Mobile IM records and directs the receipt, storage, movement and binning of materials, as well as the outbound picking, delivery and issuing of stock to end users.

Our d.Mobile IM solution offers automatic identification and data capture technology, such as barcode scanners and printers, mobile computers, wireless LANs and radio-frequency identification (RFID) to efficiently monitor the movement of materials.

Goods Receipt Transactions

Quality Inspection Processing

"Put-Away" and "Binning" Functions
